Description

- According to a study conducted by the UN, an estimated 10 billion people will live on limited resources by 2050
- Self-Sufficient Buildings could be a solution to urbanisation, especially in places like Dubai. Such buildings could provide all necessities of life (work, house, leisure, sports, energy, food...) while reducing the travel a person has to make
- With solar energy breakthroughs and increased efficiency, self-sufficient buildings seem more and more likely
